Sub : ICAO STP on Runway Rubber Removal

Sir/ Madam,

ICAO TRAINAIR Plus Standardized Training Package (STP) on “**Runway Rubber Removal**” is scheduled to be held at Indian Aviation academy, New Delhi from **4 - 8 June 2018**. Friction characteristics of runway surface is an important function for aircraft landing and reduced friction value often results in runway excursion by landing aircrafts particularly under wet conditions. Rubber deposit is one of the major reasons for reduced friction on runway surface. To equip the airport professionals with requisite knowledge, skills and attitude in the subject, IAA has scheduled **fourth delivery** of this course.

On successful completion of the course, the participant will be able to:

- *Initiate suitable NOTAM action to measure friction value of runway surface / for runway rubber removal*
- *Identify causes of reduction in friction value of runway surface and its effect on aircraft movement on active runway*
- *Appreciate importance of maintaining requisite friction value on runways*
- *Measure runway friction value with the help of friction tester*
- *Measure runway friction value when no friction tester is available*
- *Identify the low-friction areas*
- *Apply appropriate rubber deposit removal method considering the runway surface material and extent of deposits*

In view of usefulness & importance of the above, you are requested to nominate **Airside Maintenance Civil Engineers and Airside Operations Managers, CAA Aerodrome Inspectors / Auditors, Airside Safety Officers and Air Traffic Controllers** to attend the training program **latest by 4th May 2018** and derive benefit out of this opportunity. Detailed brochure is attached for your ready reference. **Nominations will be confirmed on first come first served basis.**

The officers should be relieved only after getting confirmation of nominations by Indian Aviation Academy.

Thanking you,

(Hareendranathan E P)
Director
