

राजा भोज हवाईअड्डा, भोपाल

Raja Bhoj Airport, Bhopal

Important infrastructure upgrades at Bhopal airport! A new state-of-the-art ATC tower providing better visibility, situational awareness, and operational control for our air traffic controllers has been constructed.

An advanced automatic weather observation system (AWOS) which provides real-time runway visual range(RVR) & critical weather data, aiding pilots in crucial approach & landing decisions has also been installed. Both the new ATC tower & AWOS have been commissioned & operationalized. Additionally, low visibility take-off (LVTO) procedure has been formulated to ensure flight take-offs in low visibility conditions with RVR as low as 350 meters. Bhopal airport is committed to provide safe and seamless travel experience to our passengers and airline partners.

The new ATC tower coupled with the modern AWOS & LVTO procedure will ensure best in class facilities & minimise the effects of adverse weather conditions on flight operations. These developments make our airport one of the leading airports in the country.
